

Palo Alto Networks GlobalProtect Solution Now Available for iOS on the App Store

March 19, 2013

Release Enables Mobility Policies That Deliver Uncompromised Security and Usability

SANTA CLARA, Calif., March 19, 2013 /PRNewswire/ -- Palo Alto Networks™ (NYSE: PANW), the network security company, today announced the immediate availability of the GlobalProtect app for iOS, allowing enterprises to safely enable mobile devices. Enterprises can now extend next-generation firewall security policies to mobile users, ensuring that employees can take full advantage of their mobile devices without compromising network security.

"By bringing GlobalProtect to one of the most popular mobile operating systems in use today, Palo Alto Networks is helping customers ensure their mobile device strategies incorporate network security by extending our proven safe enablement security model to smartphone and tablet platforms," said Rene Bonvanie, chief marketing officer at Palo Alto Networks. "Furthermore, our partnerships with leading mobile device management vendors ensure that our GlobalProtect iOS app works seamlessly with solutions that organizations may already have in place."

GlobalProtect can automatically connect users to the best available GlobalProtect gateway on a Palo Alto Networks next-generation firewall. As a result, organizations can consistently enforce security policies based on application, user, content and device, regardless of where the user is located. Through the safe enablement of applications, users can access business and productivity tools while enjoying protection from mobile threats to the device and data.

GlobalProtect for iOS is available now for download from the App Store(SM). Customers using a next-generation firewall to support mobile apps must have the appropriate GlobalProtect gateway licenses.
